

Export and Power trading

Export and Power trading

Action Renewables is in a unique market position – we have achieved success in the ROC market based on our ability to aggregate large volumes of ROCs from our portfolio of generators, and we now use the same model to aggregate exported power through trade agreements and sell to energy suppliers.

Here's how we can help renewable generators maximise revenue from exported electricity:

- ✓ The Action Renewables team utilises expert market knowledge to trade renewable power.
- ✓ Our unique offering removes the complexity of navigating the power market.
- ✓ By aggregating power from many renewable generators, we are able to act as a cooperative and boost the value of export payments for our clients.
- ✓ Our considerable client base gives us the selling power needed to negotiate the most lucrative PPAs on your behalf.
- ✓ We provide transparent trading agreements, with a smooth payment process, for efficient monetisation of renewable power.

Action Renewables has a strong position within the market - we currently represent over 6000 clients for ROC trading. Our unique position within the renewable commodities market, along with our cooperative based trading solution, allows us to **secure** and **increase** export value for renewable generators.

Power trading model (see below)
