

## Large Scale Generator Services (August 2024)

The Large-Scale Generation Team at Action Renewables supports owners and developers of renewable technologies as the sector strives to deliver Net Zero by 2050. The team is always at the forefront of developments in government policy, advancements in technology and opportunities in the renewable energy sector. With unrivalled experience and a proven track record, your asset is in safe hands with Action Renewables. A selection of the services we offer:

### Northern Ireland Renewables Obligation Administration

A comprehensive management package for all renewable technologies:

- Data analysis, validation and submission
- Advice and guidance for ongoing OFGEM compliance
- ROC & REGO issuance and certificate oversight
- OFGEM query management
- OFGEM audit services
- Portfolio and project management services

### Generator Repowering

Improve performance and upgrade to the latest and most efficient renewable technologies:

- Advice on OFGEM processes and ongoing compliance
- Support with statutory and regulatory responsibilities
- Engagement with relevant stakeholders
- Asset optimisation and project management services

### Road Transport Fuel Obligation Scheme Administration

Supporting developers and encouraging the production and use of renewable biofuels:

- Advice on RTFO scheme compliance and legislative requirements
- Data collection, analysis, verification and submission
- Managed engagement with the Department for Transport and HMRC
- RTFC certificate oversight

### Grid Connection Applications

From design to delivery, assisting customers applying for grid connection on all renewable technologies:

- G98/NI and G99/NI advice and application support
- Micro-Generator (NC6), NC7, NC5 & NC8 applications in ROI
- Advice and assistance on Harmonics Reporting and ENA Type Testing queries
- Project management and competitive tendering services
- PPA procurement and energy services
